

WebConnect > Secure Web Portal

Access

Anytime, Anywhere Access

Whether you're on the road, at home or in a remote office, WebConnect gives you anytime, anywhere access to all your network applications and services. With just a web browser and Internet connection, you can access the information and applications you need to perform your job quickly, securely and efficiently.

Access Resources Quickly

It's never been easier to connect users to the network resources and applications they need. With WebConnect, there is no complicated software to install and there are no complex instructions to follow. All it takes is an Internet connection, a username and a password to put all your company's applications, services and information right at your fingertips.

Log In Only Once

With WebConnect's single sign-on technology, users only log in once to securely access every resource and application on the network. In addition, because WebConnect integrates with your existing network directory service, current users won't even need to change their login credentials.

Total Integration

Simple remote access is just the beginning. WebConnect integrates all of your network's existing, custom and third-party applications to build a unique web network that is accessed through a unified browser interface. Users get a single web-friendly point of access to company applications, services and content without making a single back-end system change. That means you get a comprehensive remote access solution that gives users what they need with minimal help desk assistance.

Complete Security

Control user access to applications and services at every level within your organization. From major applications and web content to data fields in reports, WebConnect delivers a simple access-management solution that increases security and controls access to critical business information.

Integrating Your Network's Security

You don't have to build a new database of user account IDs and passwords to deliver secure, remote network access. WebConnect integrates with your existing directory service, so you can maximize current technology investments, minimize implementation costs and leverage your IT department's experience.

Overview

Stay Connected

WebConnect allows employees, business partners and customers to stay connected by giving them remote access to network files, applications, email, calendars and more.

Web Access

WebConnect is a web-based portal, which means you can access resources anytime and anywhere you have Internet access.

Single Sign-On

WebConnect consolidates all program and security passwords into a single login for all company resources.

Safe and Secure

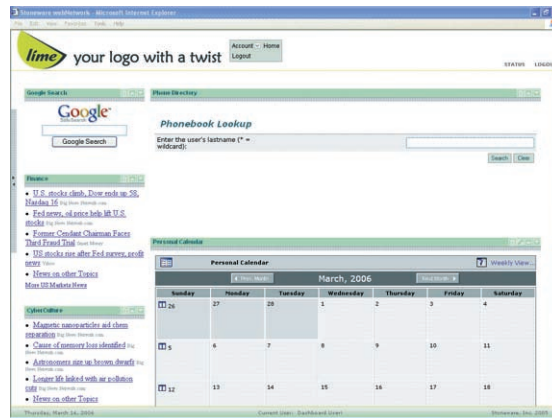

Administrative tools allow you to control access to business applications and services based on an employee or business partner's identity or organizational role.

WebConnect – Customizable Dashboard

Create Your Own Look and Feel

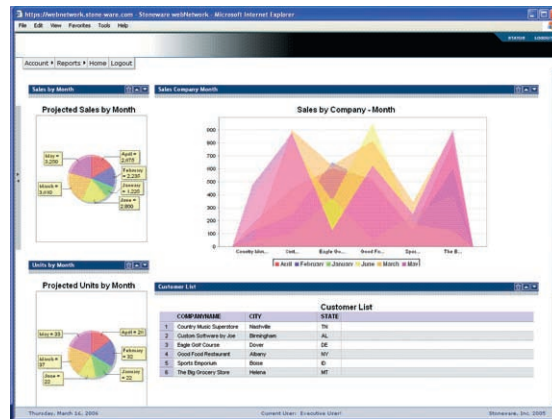

WebConnect allows you to design an interface that works for your company and individual users. You can add logos and graphics, and customize pages to include the information that is most important to you. Add calendars, company news and links to key business applications and network resources.

WebConnect Dashboard

Advanced Reporting

WebConnect's dashboard feature provides users with a consolidated view of their business operations. You can create an Executive Dashboard to view summary reports that can be distributed to customers, vendors and key decision makers in your organization.

WebConnect Reporting Services

Enhanced Services

Enhance collaboration and communication, even if your users span the globe. WebConnect extends beyond your existing network resources to deliver additional portal services that keep users productive anywhere, anytime. They can share calendars, join forums, access files, publish documents, review reports and request help, all from a customized dashboard that delivers the unique information they need, whenever they need it.
