

Seamless Cross-Platform Data Integration.

RPG2SQL Integrator™

Integrate RPG, SQL and Excel.

RPG2SQL Integrator closes the gap between applications running on different platforms by allowing all your databases and spreadsheets to talk to each other in real time.

Forget about complicated file transfers, database replications and manual re-keying. The software allows your IBM i programs to read, write to and update databases such as Microsoft SQL Server, Oracle, MySQL and MS Excel spreadsheets.

And because data transfers take place instantly and without manual intervention, all your stakeholders get the information they need, when they need it. The result is greater productivity, better decision making and a bigger bottom line.

Remove Barriers

Break down the walls between you IBM i and PC by sharing, transferring and converting data across platforms.

Work Smarter

Save time and money by eliminating complicated file transfers, database replications and manual rekeying. Let RPG2SQL Integrator do it for you.

Seamless Integration

Interactively share data between IBM i and PC environments. Use RPG and COBOL programs to read, write, insert, update or delete records in real time from PC databases that use ADO or ODBC data sources, including SQL, Oracle, Access, Excel, dBase, FoxPro, MySQL and CSV.

Real-time Updates

Because data transfers occur in real time, business systems are updated instantly, and customers, partners and other users get the information they need without having to wait for overnight updates, file transfers or duplicative data entry.

Uses:

- Share, transfer and update data across platforms and applications
- Synchronize databases
- Generate reports and analyze data more effectively

Features:

- Read and write to any ADO or ODBC data source, including SQL Server, Oracle, Microsoft Excel and Access, dBase, FoxPro, MySQL and CSV.
- Create, copy and update records
- Runs any SQL Server selection query
- Supports SQL Server stored procedures
- Database replication not required
- Works with ILE RPG and COBOL programming code
